The image above shows the HTML layout of the NBA.com website. To break down the layout of NBA.com I utilized colors to identify different html elements and semantic tags. The red color represents the body tag, this is the main container to all element tags. Green colors represent the semantic tags such as the header, main, and footer. Next, the beige color represents the other semantics tags wrap inside other semantic tags, such as navigation and section. And lastly, orange colors represent the html elements/tag, such as header container does have links, h1, anchor, and input tags. Next inside the main container, the main does have links, anchor, and image tags. Lastly is the footer container, Inside the container we can see some links and anchor tags.
