How long did I take the project exercise to finish? For me I finished the exercise 25 minutes or 20 minutes, since the lecture is easy to understand even though there are no video presentations on it. The exercise is fun and enjoyable to finish. Overall learning HTML forms does require some time to fully understand the concept of it.

So, what challenges or confusion did I really encounter during the project exercise? For me I did not find the exercise a bit difficult since we have a web developments course in our school, they also teach this kind of concept, but Armada logics inc. does explain it very well. In conclusion, the exercise is easy to learn and adapt the knowledge given by the course.
