How long did the assignment took you? As the assignments/progress keep higher and higher the assignments give now more difficulty, because we now apply all the knowledge we learned throughout the lessons at armada logics inc. learning the web structure or the html I learned a lot of important things to do and what not to do. In this assignment I think I finished it in about one hour, not because of the complexity of the assignment but because of finding what exact syntax we should used to make my code clean as the armada teach as about good coding habits. Overall, doing this assignment is fun and now I can proceed on making this portfolio pleasing to view/see.

any challenges you faced and how you resolved them? For me I think I did not face any challenges throughout this assignment, because all of the need to complete this assignment is being taught lesson by lesson. The wireframe/storyboard example also helps me to track what are the things I should consider to finish the assignment. In conclusion, the html lesson is well explained and easy to understand.
